

COMPANY POLICY

For Quality and Environment

Fratelli Vergnano S.r.l. is proud to produce steel and solid carbide tools for customers all over the world. This is the result of a continuous activity in an increasingly competitive context, that requires the utmost reliability both abroad and in Italy.

The technical and service reliability are nowadays almost granted values and they're considered as a pre-requisite for any relationship with customers but recently, with interest growing day by day, customers and the market in general are paying attention to the environmental sustainability.

Beyond the feeling of the market, we first recognize our responsibility towards future generations and the planet that hosts us. We feel the importance to pay to the prevention of the damages to the environment the same particular attention that we pay to all other aspects involved in the production cycle.

For that reason, the property, the management and all employees must act in their daily activity for customer satisfaction and in full respect of the environment.

With the aim of a continuous improvement of the Company Management System, we decided some time ago to adopt the model provided by the UNI EN ISO 9001 standard; the one provided by the UNI EN ISO 14001 standard is now added to this model.

The first standard indicates the organizational criteria for achieving, maintaining and continuously improving the quality of our products, the commercial and technical capacity of our employees, the competence of our designers and our support offices, the ability of the employees in all production and warehouse departments, with the aim of satisfying the customers and interested parties' needs.

The second standard provides us with the organizational criteria to operate correctly and respect the external environment, preventing pollution, preserving the planet's resources so that future generations and ourselves do not lack them. We must keep this goal in mind, considering our products and our activities in their entire life cycle, from the design to their useful life end.

We, the ownership and management of Fratelli Vergnano, intend to implement the above-mentioned criteria and will do everything in our power to ensure that the qualitative and environmental guidelines and objectives are pursued. We ask all the staff for their attention and for their own contribution so that the mentioned above results can take place.

Therefore, everyone will need to:

1. operate in compliance with customer requirements and applicable technical standards, as well as with the drawings, specifications and procedures available in the company;
2. comply with the environmental legislation applicable to our activities, in the design and construction of our products, in their packaging and shipping, in the exploitation of resources (energy or materials);

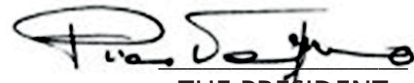

3. maintain and improve the technologies adopted in the company, being IT or machinery and equipment, making sure that they remain in line with the best available techniques and that, at the same time, our choices in this ar-ea would reduce time by time our impact on the environment, compatibly with the reliability and quality that we must guarantee to customers and to the market;
4. maximize customer satisfaction in our daily activities;
5. prevent any form of pollution or improper or unjustified use of natural, material and energy resources;
6. pursue the qualitative and environmental goals that will be adopted by Fratelli Vergnano.

This Quality and Environment Policy is the guideline that all the Company staff has to comply with, in the performance of its duties and activities.

Similarly, suppliers and contractors must ensure that they operate taking into consideration the intentions expressed here by the management of Fratelli Vergnano.

CHIERI, September 16th 2022

THE PRESIDENT
Piero VERGNANO
